HEALTHCARE

Open video intelligence — operated 24/7

Unified physical security for hospitals and health systems. Video, access, and alarms on one glass. Process while you record. Keep the cameras you have.

Physical security is moving under IT control. That is why ePlus added Bailiwick (distributed-site integration, loss prevention, physical security) and Realwave (open video intelligence). Realwave is a product of ePlus. The ePlus Realwave advantage is an open video intelligence plane and ~1,000 customer-facing engineers (Elite 150, CRN 2026 MSP 500), plus the ePlus infrastructure bench (NVIDIA, Nutanix, NetApp, Cisco, Palo Alto).

The offer

- **Vue + Operate.** Open VMS plus a managed instance so the system does not fall back to being a dark data recorder. Product and service — not a recorder SKU.
- **Vue is the operator glass — OEM of Network Optix.** Small-footprint media engine, fast decode, search, and archive. On-prem, cloud, or hybrid. Flex GRID, failover, hive, maps, mobile, video wall. ONVIF Profile S, T, and M, plus generic RTSP. 45,000+ devices, 790+ manufacturers. Hardware is optional. Placement is not. No rip-and-replace.
- **Intelligence, engineered per site.** Track, Plate, Action. Face only where policy allows. Custom models and models a health system already has land through the model pipeline. Vue ingests analytics via plugin, ONVIF, and API.
- **One timeline for the campus.** SDK, API, and the model pipeline. Access & Video Analytic events land on the Vue timeline synchronized with video. Same path to alarms and mass notification. RTLS says where; Vue says what happened. Forensics is smart motion, bookmarks, metadata search, usable export.
- **Operate is the instance, watched.** Private instance. Recorder health, model health, inference pipelines, notify, archive. Operated 24/7 under SLA. Not extra SOW hours pretending to be a product.

Healthcare use cases

Use case	What lands on the glass
Unified physical security	Video, access, and alarms on one timeline. Door forced, cabinet opened, camera pulled up. Not three vendors and a radio call.
Elopement / wandering	Track + Action on exits and units where leaving is the event. Verify before the floor is searched.
Infant security	Access or RTLS event plus video verify at the door. Tagging systems stay. Vue is the glass that proves who went through.
Workplace violence	Aggression and after-hours presence as exceptions — staff, visitor, and employee safety — not a wall to stare at.
ED capacity and flow	Occupancy, dwell, and queue while the department is busy. Operations signal, not another census spreadsheet.
Pharmacy and med-cabinet access	Who opened it, when, and the clip. Diversion investigations become search, not scrubbing.

Sensitive areas

Where cameras are the wrong sensor: privacy-first depth sensors — LiDAR or short-range ToF — for count, movement, and behavior. No face. Identity stays off unless Face is separately enabled and policy allows it.
