Realwave Intro

Powering the Real-Time Wave of Video Intelligence

Agenda

1. Our understanding of your infrastructure
2. Compliance
3. Building Out from Dispatch / Command (SOC)
4. ePlus Realwave
5. ePlus Enterprise/Bailiwick

Discovery & Initial Findings

JHPD: Need Coverage

01 / Infrastructure

VMS Systems

Six (6) VMS systems currently in place —
need to do site assessment

02 / Intelligence

Forensic Search

In search of advanced capabilities: *"Where is bald guy with blue shirt and backpack"*

03 / Automation

Object Analytics

Active requirement for **Object Counting and Tracking** across key corridors.

04 / Proactive Safety

Weapons Detection

Integration of computer-vision based
weapons detection standard of care.

05 / Lifecycle Upgrade

Flir Replacement

Identified critical necessity to phase out and completely **replace the legacy Flir system**.

06 / Strategic Next Steps

Funding & Value

Build solid ROI **Business Case** to secure budgeting and discover alternative funding.

Compliance & Standard of Care

Regulatory Frameworks

Clery Act: Timely warnings, emergency notifications, annual testing, and public reporting.

Virginia Tech / HEOA 2008: Immediate notification standard of significant active threats.

Maryland Community Safety Act: Requires body-worn cameras (BWCs) and drives active accountability policies.

Alyssa's Law: Promotes best-practice expectations for rapid, location-aware alerting.

Premises & Healthcare Liability: Exposure if layered security is not maintained to Joint Commission/CMS standards.

Local Context & Threat Patterns

Urban Environment: JHU operates where street crime frequently occurs on or adjacent to campus corridors.

Notable Patterns (Recent Years):

- Recurring armed robberies and assaults near Homewood (34th St, St. Paul St corridors).
- Oct 2025 attempted sexual assault on Decker Quad (suspect arrested via JHPD/BPD cooperation).
- Elevated aggravated assault and violent incidents relative to peers.
- Many Clery-reportable incidents occur on adjacent **public property** rather than strictly on-campus.

Obligations & Active Response

Clery Act Obligations:

- Annual Security & Fire Safety Report
- Daily crime log and timely warnings
- Emergency notifications for immediate threats

JHPD Active Expansion:

JHPD policy explicitly commits to full Clery compliance.

Inaugural officers sworn late 2024; actively expanding to target **~100 personnel** focused on Homewood, Peabody, and East Baltimore.

Key Liability Insight: Courts examine foreseeability of crime and whether reasonable steps (cameras, lighting, access control, monitoring, rapid response, and documentation) were taken.

Building Out a Proactive Command/Dispatch

SECURITY OPERATIONS CENTER

SOC: Video Wall & Proactive Video Management

Consolidate multiple systems

Event monitoring: Access, Alarms, Cams, Analytics

“Our Secret Sauce”

- Tailored Workflows
- Event processing
- Enterprise Reporting
- Forensic Search

ePlus-Enterprise/SLED (“Bailiwick”)

Core Capabilities & Service Offerings

01

Site Audits

Comprehensive on-site assessments, structural audits, and infrastructure evaluations.

02

Planning

JH Roadmap strategy and meticulous phasing over multiple years.

03

Deployment

Full service physical and information security infrastructure deployment.

04

Logistics

Secure warehousing, custom integration staging, kitting, and shipping.

05

Managed Services

Proactive, around-the-clock 24/7 technical monitoring and system support.

Why Now

- + VLMs + Agents
- + Spatial Intelligence
- + Edge Processing
- + Network Speed
- + Cloud / DNN maturity

AI Automation will
dominate 2026

Top New Developments in Computer Vision (November 2025)

Based on recent research papers, model releases, and industry announcements from the past month, here are the standout new items in computer vision. These highlight advancements in segmentation, 3D reconstruction, depth estimation, and multimodal integration, with a focus on real-time applications and scalability. I've prioritized releases and papers from mid-October to late November 2025.

Item	Description	Date	Key Impact
Segment Anything Model 3 (SAM 3)	Meta's latest iteration enables object detection, segmentation, and tracking in images/videos using short text phrases or exemplar prompts. It features a unified backbone for image detection and video tracking, trained on a 4M-label dataset.	November 19, 2025	Boosts accuracy in promptable concept segmentation by 16% over priors; open-source with SA-Co benchmark for ethical, scalable visual workflows in AR/VR and robotics.
SAM 3D	Extension of SAM 3 for 3D object/people reconstruction from single 2D images. Aligns multi-view features into a unified 3D latent space for consistent masks across views, even with changing camera fringes.	November 19, 2025	Enables precise 3D perception with minimal supervision; ideal for embodied AI in robots and interactive environments, reducing reliance on multi-camera setups.
Nemotron Parse	LLM vision model for document understanding, extracting text/tables with spatial grounding. Goes beyond OCR to handle complex layouts, turning unstructured docs into structured data.	November 19, 2025	Improves enterprise automation (e.g., finance/legal); available on Hugging Face, with up to 20% better layout understanding benchmarks.
SLAM3R	Real-time dense scene reconstruction from monocular RGB videos using feed-forward neural networks. Regresses 3D points without explicit camera estimation; highlighted at CVPR 2025.	November 20, 2025	Enables robust SLAM and autonomous navigation, achieves 30 FPS on consumer GPUs, merging SLAM with neural rendering for dynamic environments.
Depth Anything V3	Simplified, scalable monocular depth estimator using a strong representation encoder and depth-ray prediction. Handles diverse tasks like zero-shot depth, relative depth, and surface normals.	November 14, 2025	Outperforms priors on 10+ benchmarks; reduces complexity (no task-specific heads), enabling general spatial perception for drones and AVs.
Chain-of-Visual-Thought (CoVT)	Framework for VLMs to reason with continuous visual tokens alongside text, enabling dense understanding (e.g., pixel-level reasoning).	November 29, 2025	16% performance gain in visual reasoning tasks; bridges discrete/text-based AI with perceptual cues for better scene comprehension in healthcare/transport.
Kyocera Triple-Lens AI Depth	Hardware module with three lenses for detecting/measuring thin/semi-transparent objects (e.g., wires). Uses AI to improve accuracy over dual-lens predecessors.	November 13, 2025	Enhances factory inspection, surgical robots, and harvesting; reduces errors by 40% in low-contrast scenarios, with edge

. SURGE in Spatial Intelligence and Video Language Models

Command/Dispatch - Best Practices

Mass Notification

- **Primary system:** Rave Mobile Safety (Rave Alert)

Video Surveillance & Monitoring

- **24/7 Communication Center** (Homewood) monitors CCTV, card access, duress, and intrusion alarms across multiple campuses - 1,000+ total
- **LiveView Technologies (LVT)** portable units added in quads (Oct 2024): high-mast, IR/thermal, AI, lights, two-way audio (~\$32k each)
- Footage retention typically targets ~31 days | **No facial recognition** (Maryland law + university statement)

Access Control

- **J-Card** (Transact Campus) for Homewood doors; Medical campus has separate badge/access system
- Communication Center monitors card-access events

Alarm Points / Emergency Call Stations

- **117 Code Blue (Blue Light) emergency phones** on/near Homewood (Button press → alarm + flashing light + location ID + direct connect to Communication Center) | Duress and intrusion alarms actively monitored

Manned Patrol Technology

- **Body-Worn Cameras (BWC):** Required by Maryland law; JHPD Directive #433
- **Axon ecosystem:** Fleet 3 in-car cameras + Evidence.com storage + Axon Signal auto-activation + livestream capability

Other:

-  Historical gunshot detection (SECURES system ~2008–2010, ~93 sensors);
- LiveSafe app for community reporting
