Optimize Video Surveillance Data for SLED & Public Safety

Modern, high-performance storage and analytics infrastructure with Everpure + ePlus Realwave

Video surveillance has become one of the most critical tools for public safety and law enforcement. However, the explosion of video data from fixed cameras, body-worn devices, and analytics platforms has created significant challenges around storage, rapid access, search, and long-term retention.

Legacy storage systems struggle with the scale, performance, and security requirements of modern video workloads. Everpure + ePlus Realwave delivers a purpose-built foundation designed specifically for these demanding environments.

Key Capabilities

Massive Unstructured Data Handling

FlashBlade//E delivers exceptional density and performance for petabytes of video footage with dramatically lower power and space requirements.

AI & Real-Time Analytics Ready

High-performance, massively parallel platform purpose-built to support modern video analytics and AI workloads at scale.

Ransomware Resilience & Security

Built-in SafeMode snapshots and guaranteed ransomware recovery SLAs through Evergreen//One with next-business-day array shipping.

Hybrid & Multi-Cloud Flexibility

Seamless data mobility between on-premises, colocation, and public cloud with consistent services and management.
